

STAIR ROBOT

Stair Robot-SREXPRESS:

The Stair-Robot SR Express is a battery-powered stair climbing device designed for day-to-day distribution. This compact and lightweight stairclimber can handle unit loads up to 175 Kg.

The drive unit can be used to easily lift or lower the SR Express with or without a load from a van or pick-up truck.

Two basic techniques are used to move a load up or down the stairway:

- Step by step
- Flat on the staircase resting on two or more steps

The SR Express is designed for a one man operation. It features several operator friendly functions and options including fast removable battery packs, remote control, different types of wheels, height adjustable platform and adjustable handles.

The SR Express reduces the safety risks during a stair move and minimizes the physical burden on the operator.

Handling fields

- Washing machines
- Refrigerators
- Computers
- Copiers
- Crates and casks
- Furniture
